

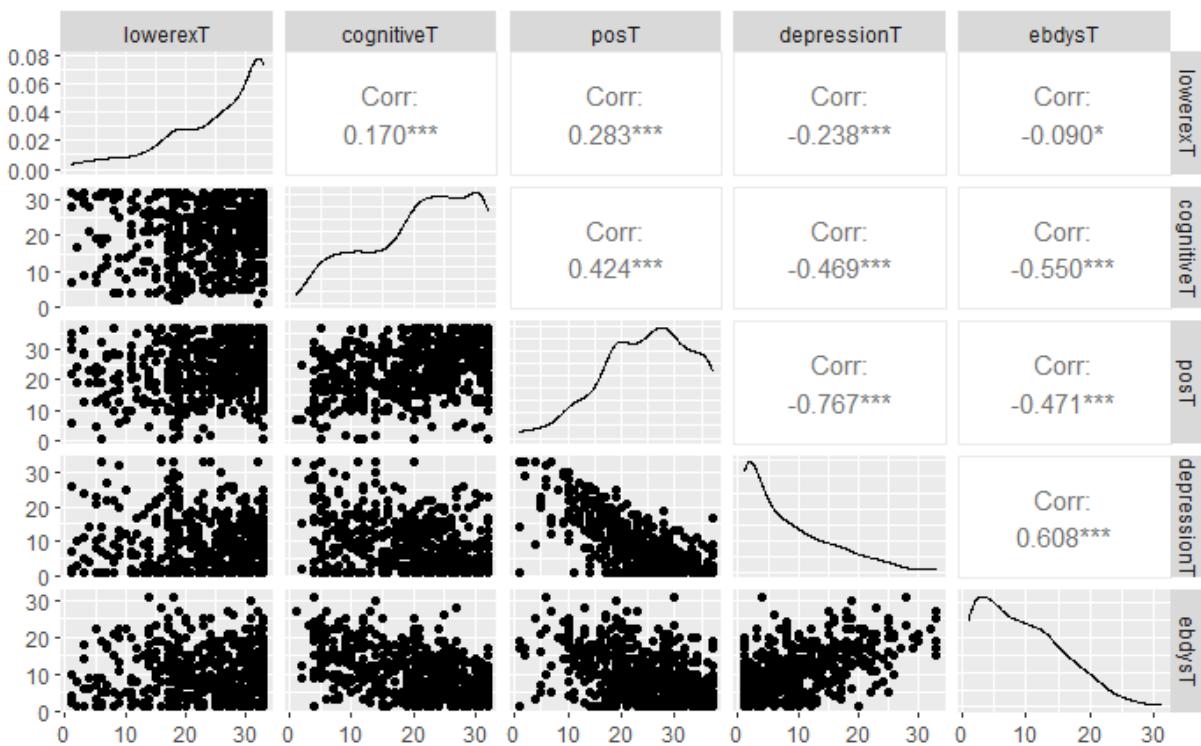

Figure S1. Scatterplot Matrix of Neuro-QOL T-scores, Displaying Pairwise Pearson Correlation Coefficients

cognitiveT, cognitive function T score; depressionT, depression T score; ebdysT, emotional and behavioral dysfunction T score; lowerexT, lower extremity function T score; posT, positive affect T score.

Note: Significance codes: .01 = *; .001 = **; 0 = ***

Table S1. Sex-Stratified Analysis of Engaging in Adequate Counts of Weekly Exercise (≥ 4 sessions)

Predictor		Female OR (95% CI)	P value	Male OR (95% CI)	P value
Age		0.990 (0.971-1.01)	.317	0.954 (0.888-1.02)	.168
Season of survey completion	Winter	Ref	-	Ref	-
	Spring	0.937 (0.513-1.70)	.830	0.920 (0.201-3.96)	.912
	Summer	0.944 (0.475-1.87)	.869	1.50 (0.180-14.6)	.712
	Autumn	0.795 (0.413-1.52)	.489	0.790 (0.103-6.08)	.818
Region of the United States	South	Ref	-	Ref	-
	West	1.65 (0.934-2.94)	.087	0.804 (0.154-3.942)	.789
	Northeast	0.811 (0.464-1.41)	.460	6.35 (0.748-79.2)	.112

	Midwest	0.897 (0.515-1.56)	.699	2.97 (0.622-15.8)	.181
Race	White	Ref	-	Ref	-
	Other	1.91 (0.723-5.42)	.204	3.90 (0.462-48.0)	.239
	Black	0.708 (0.265-1.90)	.487	-	-
BMI	Normal	Ref	-	Ref	-
	Low	0.524 (0.176-1.59)	.245	-	-
	High	1.17 (0.675-2.05)	.577	0.790 (0.209-2.94)	.723
	Very high	0.618 (0.376-1.01)	.056	1.86 (0.267-16.4)	.548
MS subtype	RRMS	Ref	-	Ref	-
	CIS/RIS	1.89 (0.659-6.69)	.272	-	-
	PPMS	1.22 (0.584-2.56)	.603	0.545 (0.119-2.33)	.414
	SPMS	1.62 (0.877-3.05)	.127	3.32 (0.653-20.8)	.167
Neuro-QOL T scores^a	Lower extremity function	1.14 (1.10-1.18)	<.001	1.09 (0.998-1.20)	.0725
	Cognitive function	1.00 (0.974-1.03)	.881	0.940 (0.850-1.03)	.195
	Depression	0.974 (0.944-1.00)	.0954	0.876 (0.789-0.959)	.00675

BMI, body mass index; CIS/RIS, clinically isolated or radiologically isolated syndrome; OR, odds ratio; PPMS, primary progressive multiple sclerosis; RR, relative ratio; RRMS, relapsing-remitting multiple sclerosis; SPMS, secondary progressive multiple sclerosis

^aHigher scores on lower extremity and cognitive function represent better functioning, while higher depression scores represent greater depression symptom severity.

Table S2. BMI-Stratified Analysis of Engaging in Adequate Counts of Weekly Exercise (≥ 4 sessions)

Predictor	Low/ Normal OR (95% CI)	P value	High OR (95% CI)	P value	Very high OR (95% CI)	P value
Age	0.974 (0.946-1.00)	.069	0.992 (0.953-1.03)	.703	1.01 (0.974-1.04)	.640
Male sex	1.65 (0.715-4.07)	.258	0.835 (0.338-2.08)	.696	4.62 (0.955-28.8)	.0714
